

Hallmark's Energy Pride Homes! Solar Installed *Before*, Your Home Arrives!

Radiant barrier roof sheathing blocks up to 94% of the radiant heat in the roof panel from entering the structure, reducing an attic's temperature by up to 30°F. Cooler attic area means your insulation can hold back the summer heat for a longer period of time.

Our industry leading tight thermal envelope with polyolefin house wrap is a **standard** in every Hallmark home. It helps keep the summer's heat and winter's cold out of your home, saving you on both cooling and heating bills each month.

Plumbing

Our unique plumbing system is made from a state of the art crosslinked polyethylene. It is non-toxic, will not corrode, helps resist freezing, maintains heat longer, has fewer joints, and does not require solvents or adhesives for assembly. Best of all, it carries a 25 year limited, no-leak guarantee.

Insulation

Highly Efficient, fire-resistant insulation that's made from stone. It is the insulation solution that helps save energy and creates quiet and safer homes. Benefits - water repellent, fire resistant, and sound absorbent.

Solar Roof Shingles

Instead of merely lying passively on your house, these shingles generate electricity from the sun's rays to power your life – while still keeping everything inside protected from the elements. And between making electricity, saving you money and increasing your home's value, they're one of the smartest investments you can make for your home.

Whole House Ventilation System

A Whole House fans saves up to 90% off your A/C bill, cools your entire home, ventilate your entire home, and exhausts your home of foul odors. Our system is made in the United States, are currently the quietest whole house fan on the market today, and include a standard 10 year warranty.
